PRIVACYSAFE®

SECURE_ZONE_

Private by default. Public by choice.

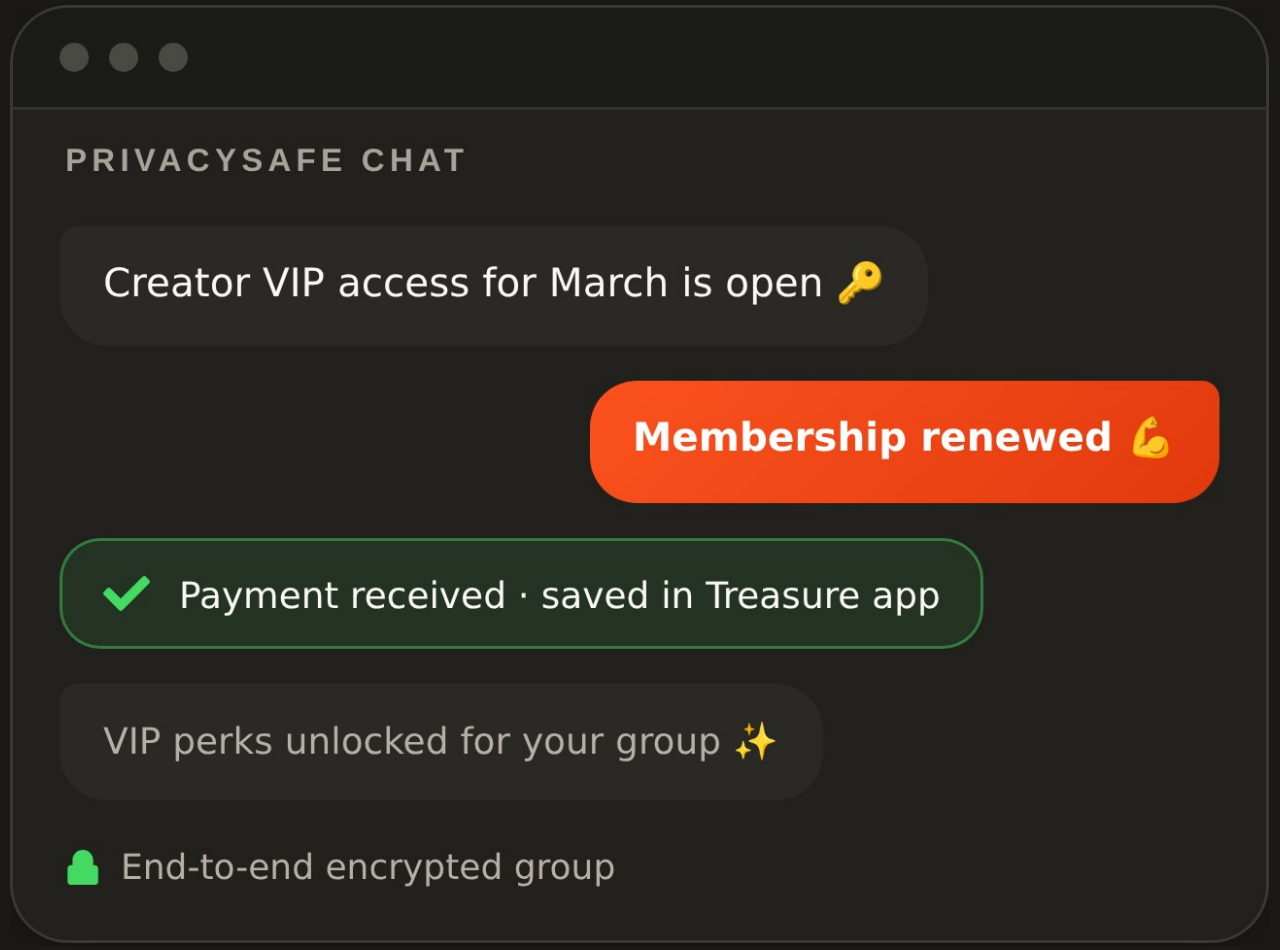

Your secure zone for private groups: sovereign identity, encrypted chat, shared files, and storage for crypto credentials and your treasure.
You hold the keys, join exclusive communities, and publish what you want when you want. Sync your data and wipe your device without worry.

No phone number required. Free/Libre and Open Source Software. Self-hostable. Shipping on Android / Google Play, Mac OS, Windows, GNU/Linux, and soon iOS.

MARKET_SIZE_

Markets are moving into private groups.

Billions of people have moved their most important communication to private groups

3B	1B	200M	80M	70M
WhatsApp	Telegram	Discord	Slack	Signal

A FRACTION OF THE MARKET = MILLIONS OF USERS

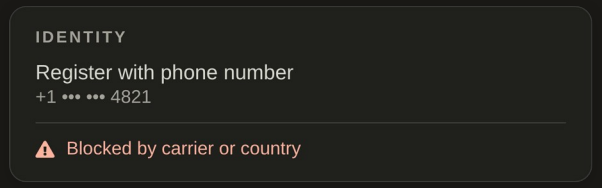

4.35B combined monthly active users (MAUs). After applying a conservative 50% overlap adjustment for users who are not unique, the addressable base is roughly **2.2B users**. Capturing just **0.1% = 2.2M users**, **0.5% = 11M**, and **1% = 22M**.

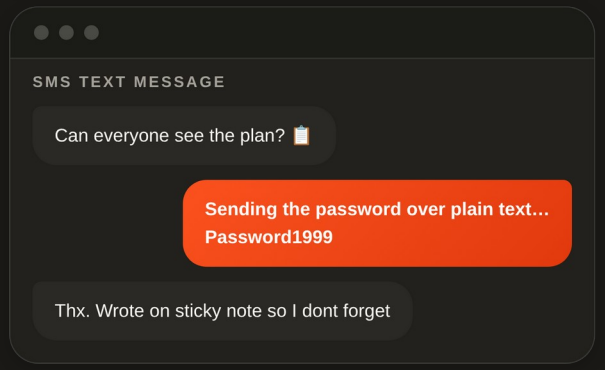

Illustrative sensitivity analysis based upon publicly available information.

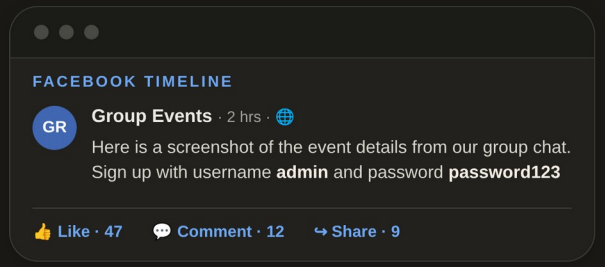

SOCIAL_SHIFT_

Old-fashioned group chats are a mess.

PROBLEM

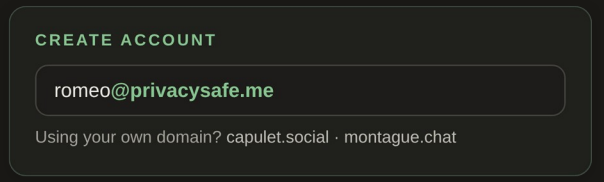

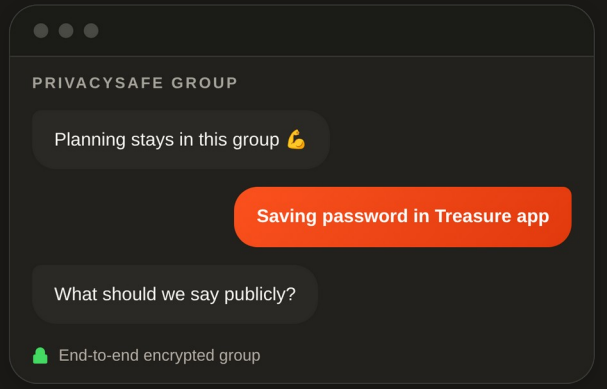

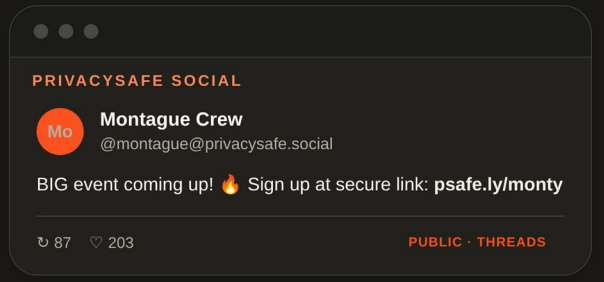

vs.

SOLUTION

Phone numbers expose people

Phone numbers tie identity to a person, carrier, and country. They can be blocked, reassigned, or taken over, while also making it easier to correlate activity across accounts.

Sensitive data should not be scattered.

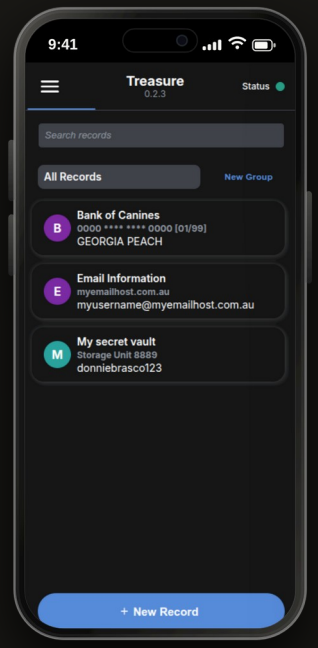

Spreading sensitive data across apps and services the user can't control encourages weak security practices, accidental disclosure, and unwanted copying.

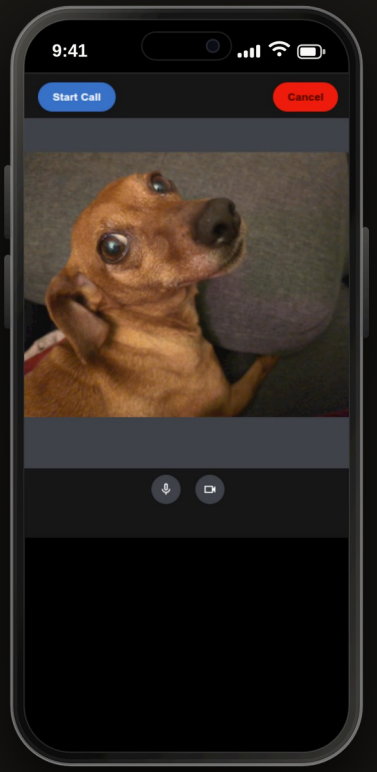

Private groups still need a public voice.

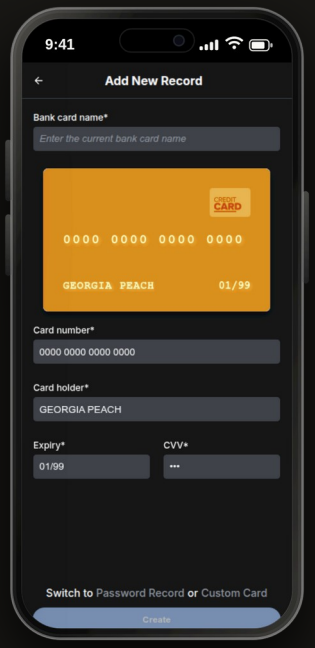

Groups should be able to choose what stays private and intentionally publish only what belongs in public.

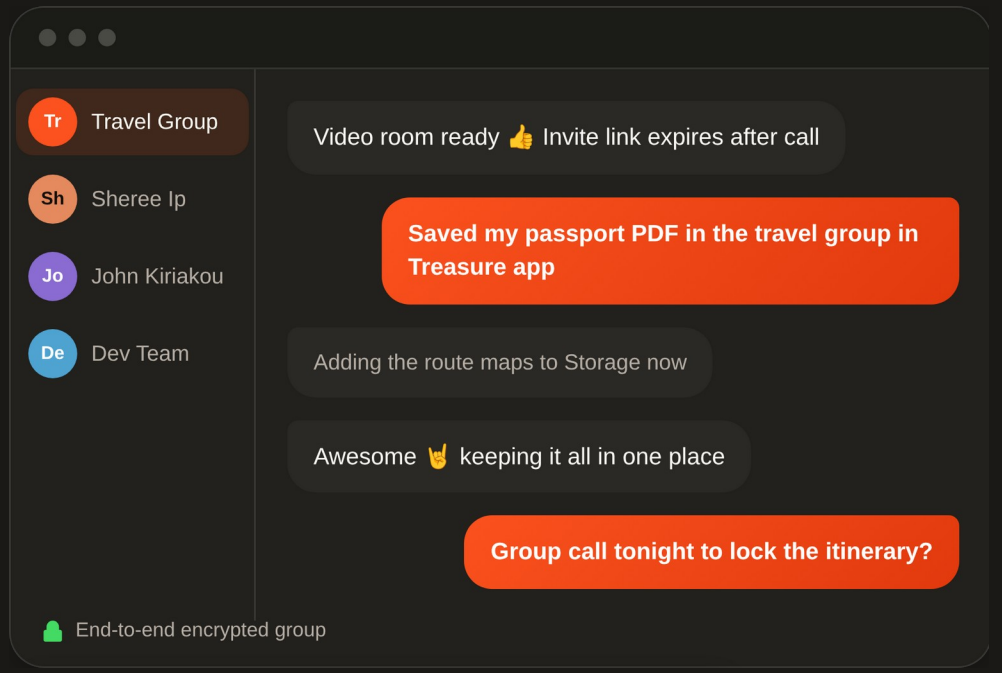

OUR_SOLUTION_

Discord falsely promised a “server.” PrivacySafe gives groups a secure zone.

Our secure zone is like a personal “cloud” but much safer. The users control the keys, control access to their chats, and control the domains that their identities are tied to. B2C consumers can become B2B enterprise with our software on their domains and their hardware.

COMPETITIVE_VALUE_

A group should be more than a chat.

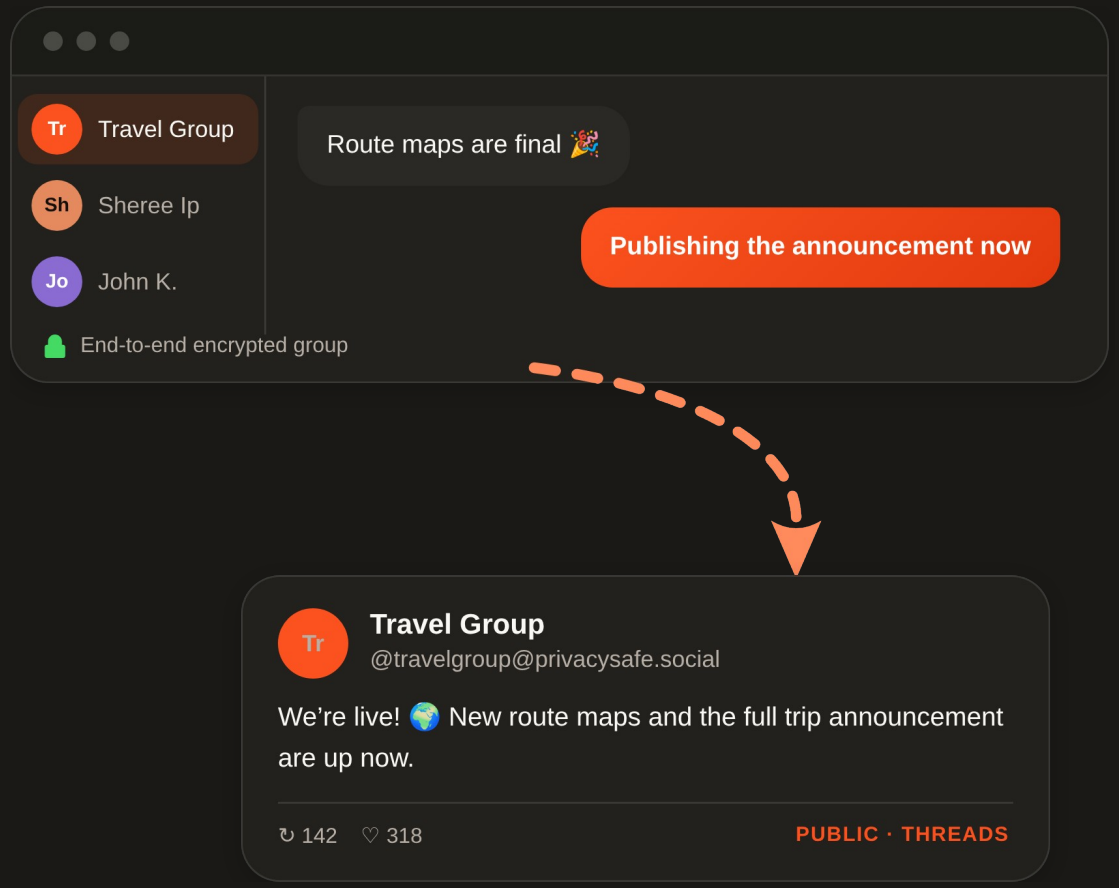

PrivacySafe combines identity, storage, infrastructure, publishing, and encryption in a secure zone.

Capability	PrivacySafe	WhatsApp	Telegram	Discord	Slack	Signal
Group conversations	●	●	●	●	●	●

Metadata encryption	●	—	◖	—	—	◖

● Native / core capability ◖ Partial or materially different model — Not part of the product model

PUBLIC_BRIDGE_

Your private data stays protected. Share publicly, on your own terms.

PrivacySafe grows through communities who already know and trust each other. Groups stay private by default and, when a group has something to say, it publishes to the public social web on its own terms.

We launched **PrivacySafe.Social** for this purpose and people can connect with thousands of other decentralized servers and millions of users.

One group decision can bring dozens, hundreds, or thousands of members into the network together.

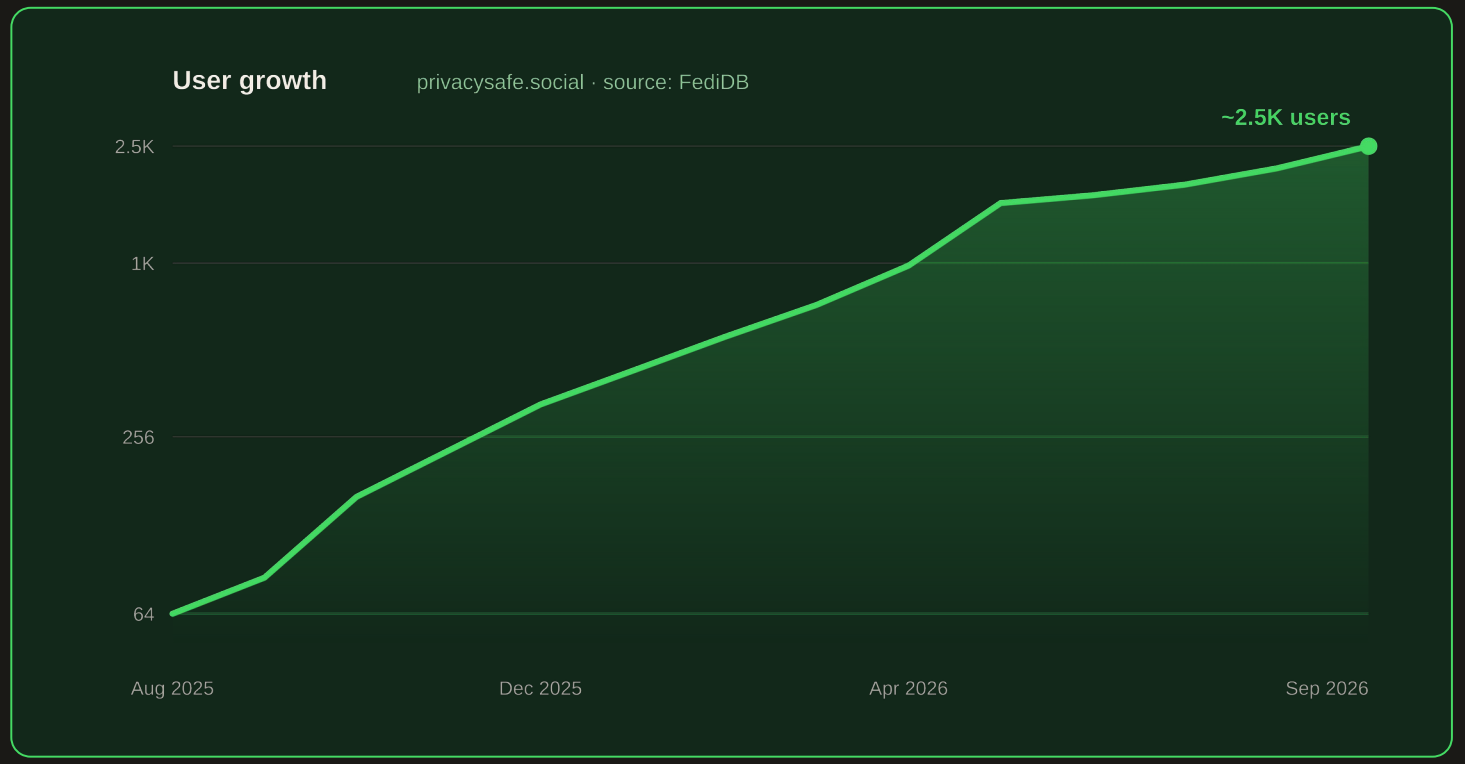

NETWORK_TRACTION_

Scaling a community without compromise.

~2.5K
PrivacySafe Social accounts

~520
monthly active users

1,000+
connected servers

Journalists Network — 64 members

Am Jo Le Pri Da +59

secure zone active

Press Freedom Alliance — 42 members

Am Ki So +39

User: Am added 34 members from Journalists Network

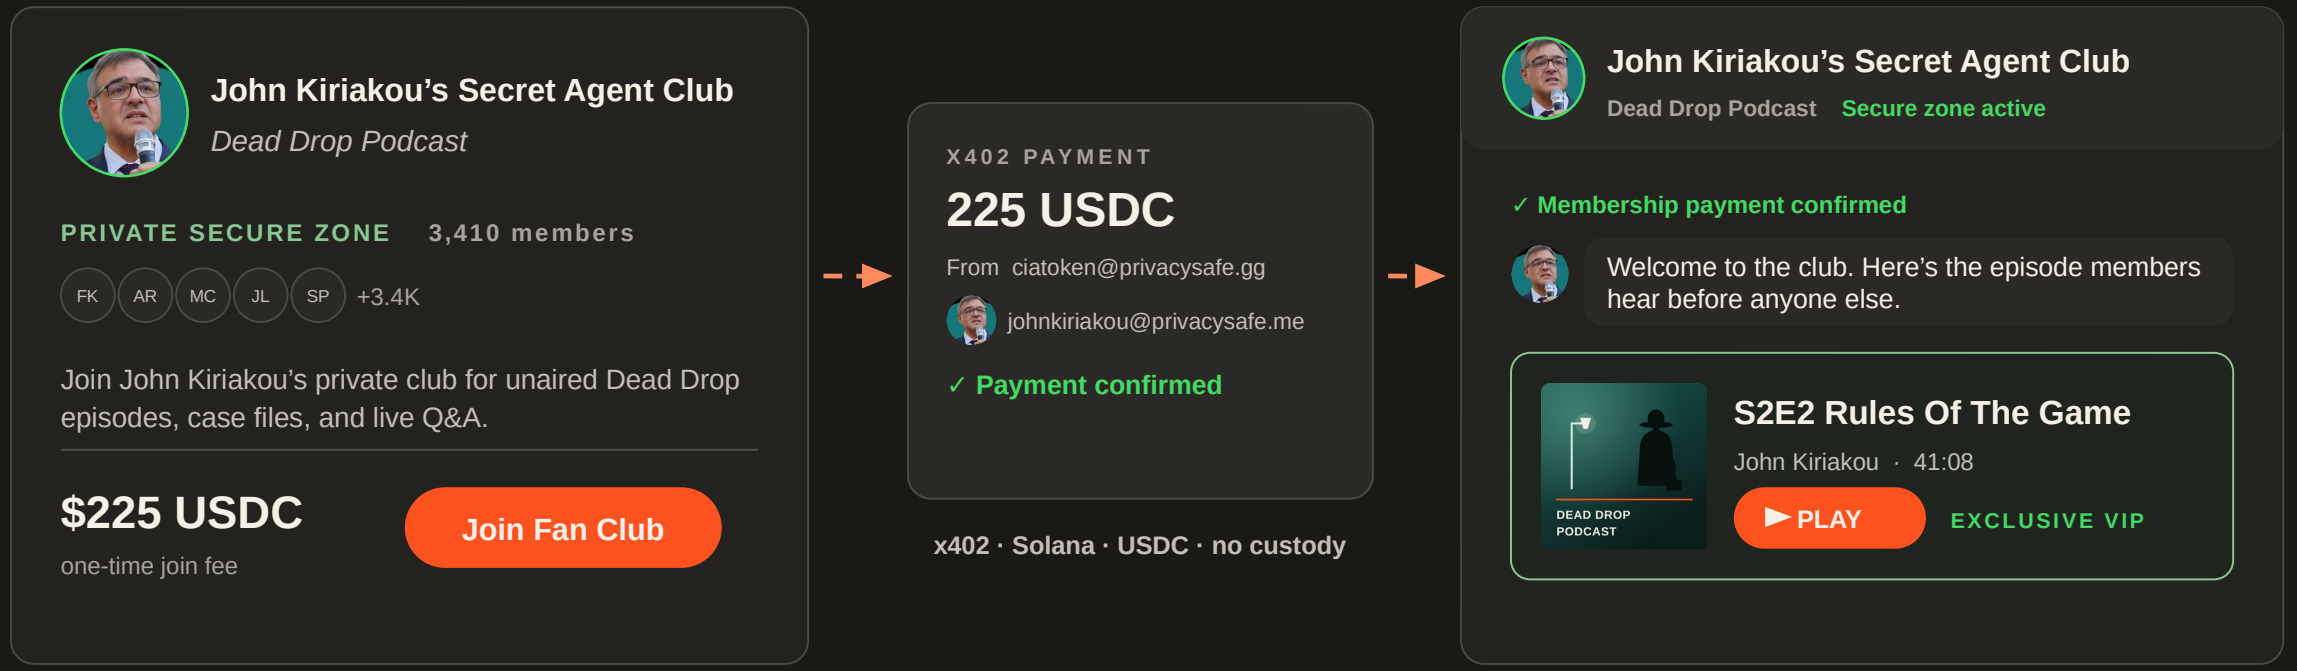

WE'RE SERIOUS ABOUT DECENTRALIZATION.

Our goal is bridging with not just PrivacySafe Social but much of the decentralized web:

- **Ethereum:** Public interactions can be written to EVM-compatible blockchain.
- 65K transactions-per-second (TPS) on Mac Mini, 1M+ TPS on dedicated hardware.
- **Solana:** Download PrivacySafe from the dApp Store.
- We participate in Superteam Australia & Colosseum Hackathon.

PAYMENTS_SYSTEM_

PrivacySafe helps people to monetize their communities.

Just one example. x402 payments built for AI agentic workflows.

Artists + Musicians · Consultants · Lawyers · Health Professionals · Public Figures

BIZ_MODEL_

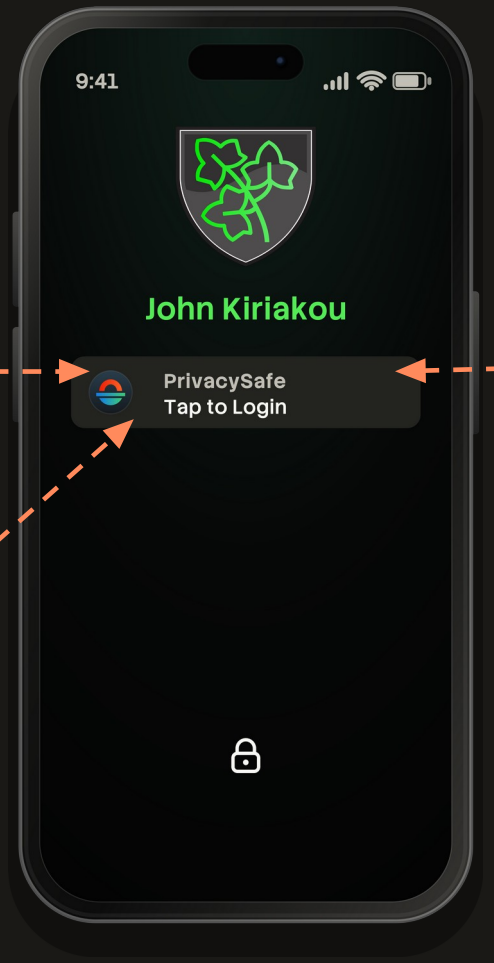

Sovereign identity becomes stickiness.

Enterprise

Domain: your-domain.com

CONSUMER TRUST CREATES THE PATH TO ENTERPRISE.

Tiered pricing builds a pipeline from individual users to teams and organizations, building on trust earned through strong design and security. Loyal users are a natural bridge from B2C adoption to B2B infrastructure and support.

ORG_STRUCTURE_

A company to scale our vision, working with a solid foundation.

A proven model for innovative technology.

Linux, **Mozilla**, **Ethereum**, and **Solana** show how innovative technology can pair public-interest stewardship with strong commercial ecosystems. Foundations strengthen public infrastructure and communities while commercial companies build products, services, and markets around them.

PrivacySafe uses that model deliberately.

- **Ivy Cyber LLC** owns the PrivacySafe trademarks, brand, and commercial assets.
- **PrivacySafe Foundation** supports the public-interest work that strengthens the ecosystem for the technology.

Ivy Cyber™ — COMMERCIAL COMPANY

Owns the PrivacySafe trademarks, brand, and commercial assets. Builds, publishes, hosts, supports, and commercializes PrivacySafe products and services.

Investment and commercial revenue stay here.

PRIVACYSAFE™ FOUNDATION — SEPARATE 501(C)(3) PUBLIC CHARITY

Strengthens the ecosystem around PrivacySafe through public infrastructure, standards, documentation, security research, and community development.

Supported through grants and donations, separate from investor capital.

CAPITAL_RAISE_

Raising pre-seed to scale a product that already ships.

$1M

TARGET PRE-SEED

$500K	$15M	SAFE
Initial close	Post-money valuation cap	Post-money

The round is $1M. The initial close is $500K. Capital deploys at the initial close while the round continues to the full target.

TARGET MARKETS

- Higher Ed
- K-12 Schools
- Law Firms
- Family Offices
- Healthcare

WHAT THE CAPITAL SCALES

Product + Engineering
Apps · reliability · security

Growth + Community
Partnerships · group adoption

Infrastructure + Operations
Hosting · deployments · support

MILESTONES FOR THIS CAPITAL

1. Penetration beyond high-tech early adopters, targeting education and legal.
2. Production deployments across North America, Europe, and APAC.
3. Interoperability with Big Tech social networks as well as alternatives.

The raise is into Ivy Cyber LLC, the commercial company that builds, publishes, and scales PrivacySafe. Structure and terms are discussed directly with investors.

Schedule a Conversation

Sean O'Brien

FOUNDER & CEO

Cybersecurity researcher at Yale Law School

Sean is founder of Yale Privacy Lab and a Research Scholar at Yale Law School. He is Director of Cybersecurity & Computer Science at Bay Path University and serves as Deputy Director of the Free Software Foundation as well as President of PrivacySafe Foundation.

Sheree Ip

DIRECTOR OF STRATEGY & INNOVATION

Blockchain educator at Curtin Law School

Sheree oversees strategic partnerships at Ivy Cyber, including our work with teams in Canada and the European Union. She is a Solana Superteam Australia member, teaches at Curtin Law School, and serves as Vice President of PrivacySafe Foundation.

John Kiriakou

SECURITY ADVISOR

Former CIA counterterrorism officer

John advises Ivy Cyber on operational security and teaches the Masterclass. He spent 14 years in the top ranks of the CIA and publicly exposed the CIA rendition program. John is an in-demand speaker around the globe, with millions of followers and billions of views.

Our team spans four continents, with engineering partners in Canada and the European Union.
